NARCISSUS

15

CROCUS

21

MISCELLANEOUS

24

15

Narcissus

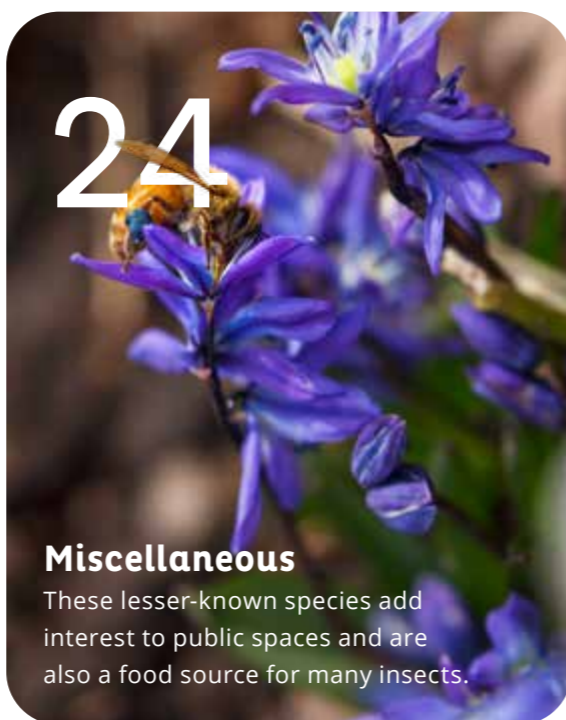

Often planted in public open spaces because they naturalize easily.

Crocussen

A very early flowering bulb that naturalises well.

21

24

Miscellaneous

These lesser-known species add interest to public spaces and are also a food source for many insects.

Hyacinths

Hyacinths: these early flowering bulbs are ideally suited in spring borders.

3

5

Tulips

the most famous flower bulbs in the world.

Perfect for pollinators

Available in the Green

Hyacinths

Prepared hyacinths are treated by specialist nurseries to make them flower earlier. For Christmas flowering, these bulbs must be ordered well in advance so that they can be treated accordingly.

For best results we prefer to deliver them to you during mid September. You should then plant them immediately and keep them at 9°C until the bud appears. Then you should bring them into the glasshouse for finishing.

Tulips

Being an Anglo-Dutch company we have experienced some language difficulties over the last few years. We would consider all small growing tulips as being dwarf. We understand the English mean Greigii and kaufmanniana tulips as being dwarf varieties. The clusiana types and other miniature species are called naturalizing botanical species.

Narcissus

Narcissus

All narcissi and Daffodils are classed under Narcissus.

This is the only correct way of pronouncing this group. There are 13 described divisions of narcissus under this group. For example all trumpets are division 1. All large cupped are division 2. When speaking of daffodils in common, we think of large flowering Narcissus varieties.
